## DETAILED ACTION

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-16 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,726,531. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patented claims and present claims are drawn to the same tool that is power driven. The present claims are more broad claiming a 'power-driven tool' or 'implement for imparting movement to the tool' as opposed to the patented claims reciting an ultrasonic or vibration movement.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3723

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2,5,7-9, 10,11,12,14, 16 rejected under 35 U.S.C. 102(e) as being anticipated by Rosenberg-5,797,744.

Rosenberg discloses a tool and method for abrading a surface wherein the tool has a shank portion (12) to be held by a power-driven tool (rotating mechanism) to provide rotary movable contact between the tool and workpiece (tooth), wherein a working portion (14) of the tool is connected to the shank, having a smooth surface (outside, bottom edge) preventing abrasion and a depression (19) with an abrading mechanism (abrasive paste) for removing material from a workpiece.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,4,6,13,15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosenberg in view of Nash-4,283,175.

Rosenberg does not disclose using ultrasonic vibrational movement nor using sharp edges for abrading. However, Nash teaches an abrading implement for the same type of workpiece as Rosenberg, wherein the implement is mounted for vibrational, ultrasonic movement and wherein the tool abrades with sharp edges. Therefore, it

would have been obvious at time invention was made to one of ordinary skill in the art to provide the tooth abrader of Rosenberg with ultrasonic movement and sharp edges, as taught by Nash, in order to more thoroughly and efficiently abrade the tooth surface.
